

Railway Deployment - Quick Fix

Issue Fixed: Nixpkgs Error

Problem: `error: undefined variable 'npm'`

Solution: Updated nixpacks.toml to only use `nodejs-18_x` (npm is included)

Option 1: Use Fixed nixpacks.toml (Recommended)

Your nixpacks.toml is now fixed! Just redeploy and it should work.

Option 2: Super Simple Approach

If you still get nixpkgs errors, try this:

1. **Rename nixpacks.toml to nixpacks-backup.toml**
2. **Rename nixpacks-simple.toml to nixpacks.toml**
3. **Redeploy**

Railway will auto-detect Node.js and use simpler commands.

Environment Variables Still Needed:

```
DATABASE_URL=postgresql://username:password@hostname:port/database
NEXTAUTH_URL=https://your-railway-url.up.railway.app
NEXTAUTH_SECRET=ai-product-calculator-railway-secret-2024-deploy-key-xyz789
NODE_ENV=production
```

Next Steps:

1. Set environment variables in Railway
2. Redeploy (should work now!)
3. Get your actual Railway URL
4. Update NEXTAUTH_URL with real URL
5. Redeploy one final time

Your app should deploy successfully now! 🎉
